

Exposed API Parameters in Langflow input Schema for reviewing US from Jira

Edited Prompt in ICEPOT Technique- making it usable for generic domain

Received output for various US in Postman

Sent Customised Prompt from API Request mentioning the Healthcare Domain

The screenshot displays a REST client interface with a sidebar on the left containing a list of collections and environments. The main area shows a POST request to the endpoint `http://localhost:7860/api/v1/run/7f4c9a2f-2a5f-4c67-a75d-e40dffabe1ff?stream=false`. The request body is in raw format and contains a JSON object with the following fields:

```
{
  "output_type": "text",
  "input_type": "text",
  "input_value": "Act as an expert AI assistant specialized in Business Analysis of Health Care Domain ,for user stories retrieved from JIRA. Analyze the following user story: {userStory}. Assume the story belongs to a regulated healthcare project and will be used by a cross-functional team including Business Analysts, QA Engineers, and Developers. Evaluate the user story against the following parameters: 1. Clarity - Is the story easy to understand and free from ambiguity? 2. Completeness - Are acceptance criteria, preconditions, dependencies, and business rules adequately defined? 3. Business Value Alignment - Does the story clearly support healthcare objectives such as patient safety, compliance, operational efficiency, or improved user experience? 4. Testability - Can QA engineers derive clear and measurable test cases from the story? 5. Technical Feasibility - Is the story realistically implementable within typical healthcare system constraints and integrations? Assign a score between 0 and 20 for each parameter."
}
```

The response status is 200 OK, with a response time of 4.88 s and a size of 18.65 KB. The response body is in JSON format and contains the following data:

```
{
  "text": {
    "text_key": "text",
    "data": {
      "text": "**User Story Review: Secretary Dashboard Doctor Calendar**\n\n**Parameter Scores (out of 20)**\n\n| Parameter | Description | Score (out of 20) | -- | -- | -- |\n| Clarity | The story is vague and lacks detailed acceptance criteria. | 6 |\n| Completeness | Preconditions not clearly mentioned, and acceptance criteria are missing. | 4 |\n| Business Value Alignment | The story lacks clear healthcare relevance and compliance focus. | 8 |\n| Testability | It's difficult to derive test cases from this story due to lack of details. | 5 |\n| Technical Feasibility | The story lacks information on system constraints and technical feasibility. | 7 |\n\n**Overall Quality Score (out of 100): 30**\n\n**Improvement Recommendations:**\n\n1. **Add explicit acceptance criteria** for the secretary dashboard functionality."
    }
  }
}
```

Parameter	Assessment	Score (/)
Clarity	The user story lacks sufficient detail regarding the Secretary Dashboard and Doctor Calendar functionality, resulting in ambiguity around expected	12
Completeness	Key elements such as acceptance criteria, preconditions, and expected	8
Business Value	The story appears to support a healthcare workflow, but the underlying business value is not explicitly articulated.	15
Testability	Limited detail and missing acceptance criteria make it difficult to derive	10
Technical Feasibility	The requested functionality appears feasible; however, the absence of integration and workflow details limits a thorough technical assessment.	14

Overall Score: 59 / 100

Key Improvement Areas

1. Define Clear Acceptance Criteria

Provide measurable and testable acceptance criteria covering:

- Standard workflow scenarios
- Validation requirements
- Error handling
- Edge cases and exceptions

2. Clarify User Roles and Responsibilities

Clearly identify:

- Secretary responsibilities
- Doctor responsibilities
- Approval workflow ownership
- Required permissions and access controls

3. Establish Validation Rules

Document rules governing Doctor Calendar operations, including:

- Scheduling conflict checks
- Data validation requirements
